

## Adams Cable Self Install Kit

1. Locate a wall outlet with a Coax Cable Connection. Screw one end of the supplied Coax Cable into the wall outlet making sure the connection is tight.
2. Now locate the Coax Cable Connection on the back of the supplied ARRIS Cable Modem and screw the other end of the Coax Cable making sure the connection is tight
3. Take the supplied power cable for the Modem and plug it into the back of the Modem and then into the nearest wall outlet. The modem will then perform updates on itself and may reset several times.
4. Once the modem is done updating, connect the supplied Ethernet Cable into the yellow colored port on the back of the Modem (depending on the model there may be multiple all will work). Then plug the opposite end into either a Router or into a Computer.
5. If subscribing to Digital Phone Service, take the supplied Phone Cable and plug it into the small grey port on the back of the ARRIS Cable Modem. If there are two small grey ports plug into the one labeled Port 1. Plug the other end into the Phone Port on the back of a Phone.
